

CMET® T747A is a dodecenylsuccinic acid half-ester type rust inhibitor with excellent rust prevention performance, low acid value, good fluidity, and good oil solubility. This product can form a protective film on the metal surface to prevent metal surface corrosion and rust, and form a dense oil film with the metal. It is an excellent rust inhibitor with excellent demulsification performance. It is widely used in the formulation of industrial lubricating oils and rust preventive oils such as turbine oil, machine tool oil, hydraulic oil and gear oil, and is particularly suitable for the formulation of turbine oil and hydraulic oil with lower acid value requirements.
